

# EIX-WG Update

**i n e x**  
*i n t e r n e t n e u t r a l e x c h a n g e*

Nick Hilliard  
Head of Operations

[nick@inex.ie](mailto:nick@inex.ie)

## ● Growth

- 35 members now (18 at last presentation)
- 12 Associate members
- 1G daily peak traffic (more during spikes)
  - spikes above this mostly due to video streaming
  - (politics is most popular topic, in case you ask)
- 4 meetings per year - very well attended

## ● Network stuff

- Still using GE in core, Transmode CWDM for metro links - seems nice and stable
- 10G stuff planned. Waiting for customer demand.
- May use 10G CWDM(!), depending on cost

- Interesting stuff
  - Netflow based peering matrix
    - doesn't understand TCP MD5 checksums
    - but, indicates 66% peering
  - Dual LAN infrastructure to manage down-time from
    - planned maintenance
    - pilot error
    - storms and all that sort of thing
  - 2x Route servers in the works - should be ready soon
  - We now host DNS stuff:
    - Verisign J Root, .com and .net
    - .IE and 3.5.3.e164.arpa
    - AS112 (reverse DNS for RFC-1918)

So long and thanks for all the fish!
